Aviatrix Multicloud Network Architecture

Site2Cloud Introduction

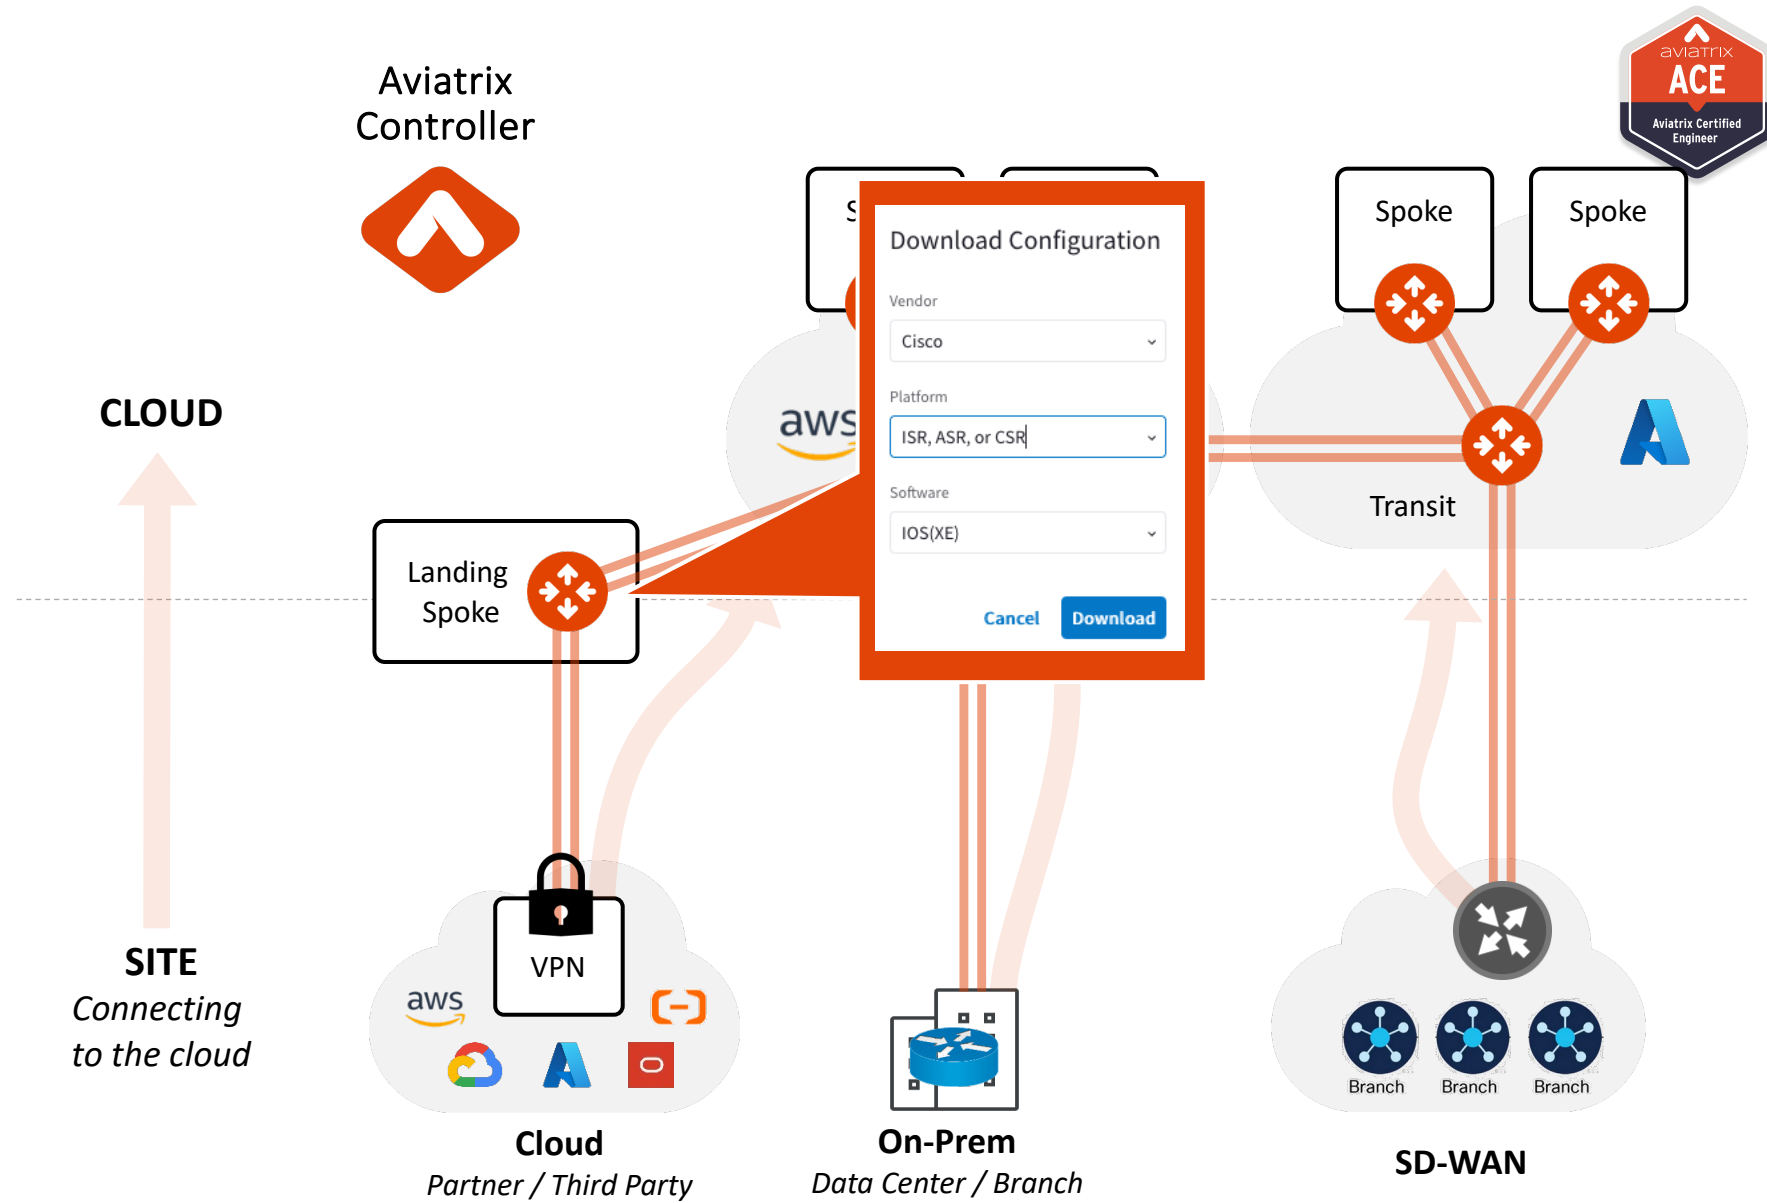

IPsec connection to Public Cloud:

- On-Prem DC
- Branch
- 3rd Party Appliances, SD-WAN
- Clouds Native Constructs (VPCs/VNets/VCNs)

Site2Cloud Solution

- Easy to use and template-driven
- Built-in diagnostic tools
- Solves Overlapping IPs Challenges

Site2Cloud – Deployment

BGP is supported on Site2Cloud tunnels to either Transit Gateway or Spoke Gateway

Connectivity External Connections (S2C) AWS TGW Native Peering Certificates

Connectivity Diagnostics

- Tunnel is operational?
- ‘Current’ number is increasing on both ends
 - **CoPilot> Networking > Connectivity > External Connections (S2C) > Connectivity Diagnostics**
 - Make sure SPI (Security Parameter Index) matches on remote end
 - SPI is an identification tag added to the header while using IPsec for tunneling the IP traffic
 - SPI is required part of an IPsec Security Association (SA)
 - https://en.wikipedia.org/wiki/Security_Parameter_Index

Monitoring – SPI

‘Current’ number is increasing

In the event of an IPsec VPN tunnel going down, follow these steps in sequence:

1. Confirm Layer 3 connectivity

- Public IP reachable? Is there an ISP (BGP) issue?
- If ping is disabled, check packet capture on remote public IP for ISAKMP packets

2. Confirm SG/NSG allowed for outbound

- UDP 500 (ISAKMP – for ESP)
- UDP 4500 (NAT- Traversal)

3. Confirm whether IPsec Phase 2 or IPsec SA negotiation is stuck

- Restart IPsec service from SITE2CLOUD > Diagnostics

4. Check policies outside each end of the tunnel

- ACL policies on remote end
- Security Groups/NACLs on Cloud side

Supported IPsec Encryption Algorithms

Dead Peer Detection Mismatch

- Dead Peer Detection is configured on Aviatrix gateways by default as follows (can be configured):
 - interval 10 seconds
 - retry 3 times
 - max failure 3 times
- If DPD is disabled on remote end:
 - Disable it on Site2Cloud gateway from **Networking > Connectivity > S2C conn. > Settings**
 - Restart the VPN service from **Networking > Connectivity > S2C conn. > Connectivity Diagnostics**

NOTE:

- This will restart all tunnels on this gateway
- Could impact your service till the tunnels come up

BGP Troubleshooting

- **PATH:** CoPilot > Networking > Connectivity > External Connections (S2C) > BGP Diagnostics

The screenshot shows the 'External Connections (S2C)' page in the Aviatrix CoPilot interface. The page has tabs for 'Connectivity', 'External Connections (S2C)', 'AWS TGW', 'Native Peering', and 'Certificates'. Under 'External Connections (S2C)', there is a '+ External Connection' button and a 'BGP Settings' link. A search bar and 'All Connections' dropdown are also present. A table lists two connections:

Name	Tunnel Type	Local Gateway	Remote Gateway IP
ACE-ONPREM-DC	BGP over IPsec	ace-aws-eu-west-1-transit1	18.170.34.236
S2C-PARTNER	Static Route-Based (Mapped)	ace-gcp-us-east1-spoke1	18.133.38.114

A dropdown menu is open for the first connection, showing options: 'Download Configuration', 'Connectivity Diagnostics', and 'BGP Diagnostics'. The 'BGP Diagnostics' option is highlighted with a red box.

Edge

Introducing Aviatrix Edge

The only multi-cloud native platform with enterprise-grade visibility and control for public cloud and the edge
Aviatrix software in multiple form factors providing consistent network, security, and visibility to the edge.
Edge locations appear and behave as another VPC/VNET with spoke and transit capabilities.

Cloud Out Architecture

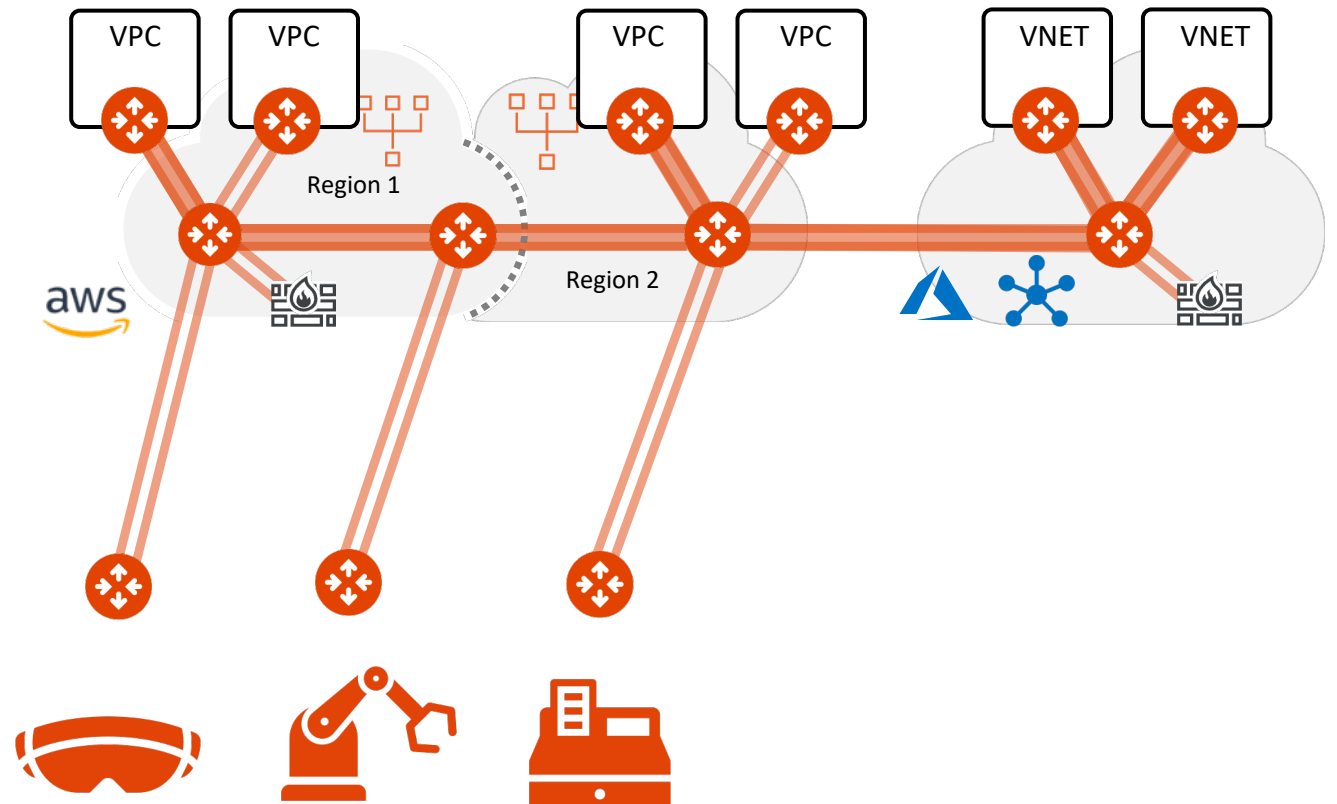

Simplified Edge Management

Consistent Secure Edge

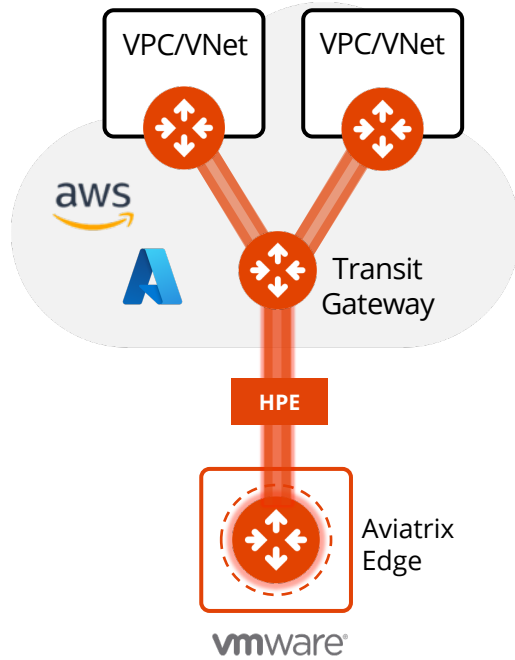

Simplified Edge On-boarding

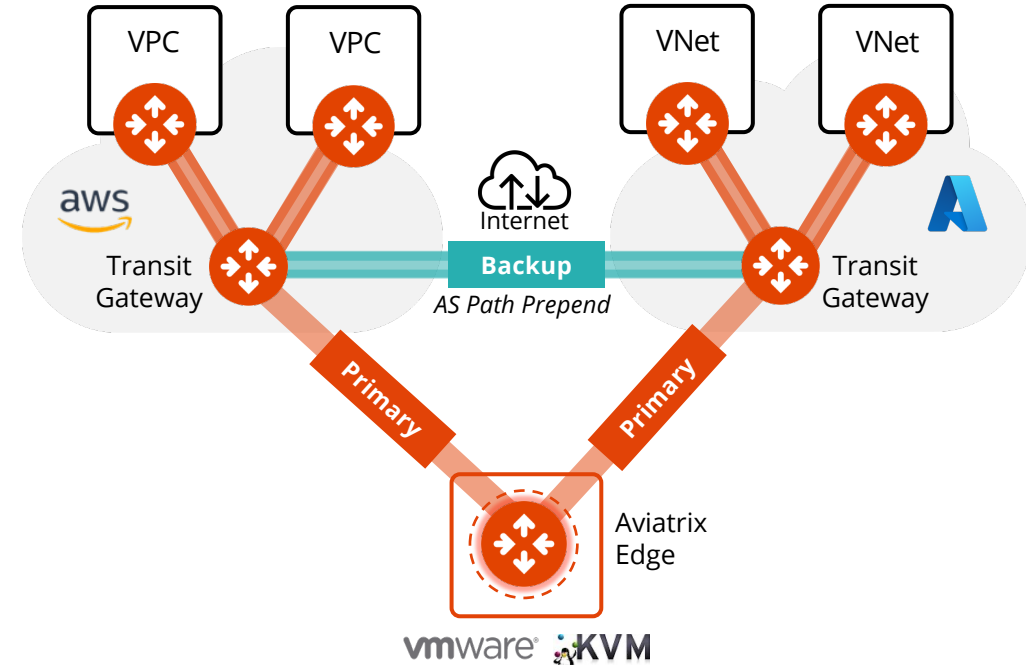

Aviatrix Edge Use Cases

Extend the Aviatrix Platform to the Edge

Multi-Cloud Connectivity via Aviatrix Edge

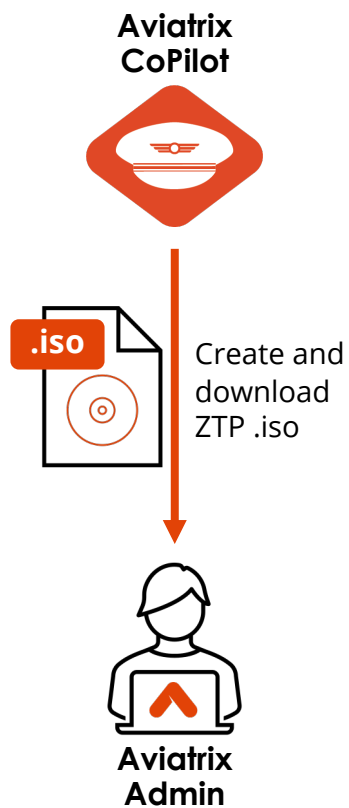

Edge 2.0 Deployment Workflow - Demo

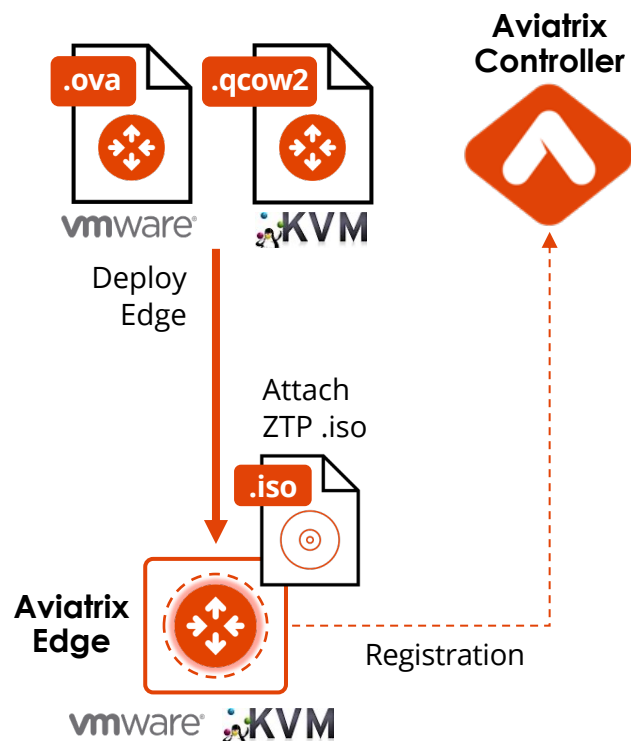

1

Create ZTP for Edge

2

Deploy Edge virtual machine and attach ZTP .iso

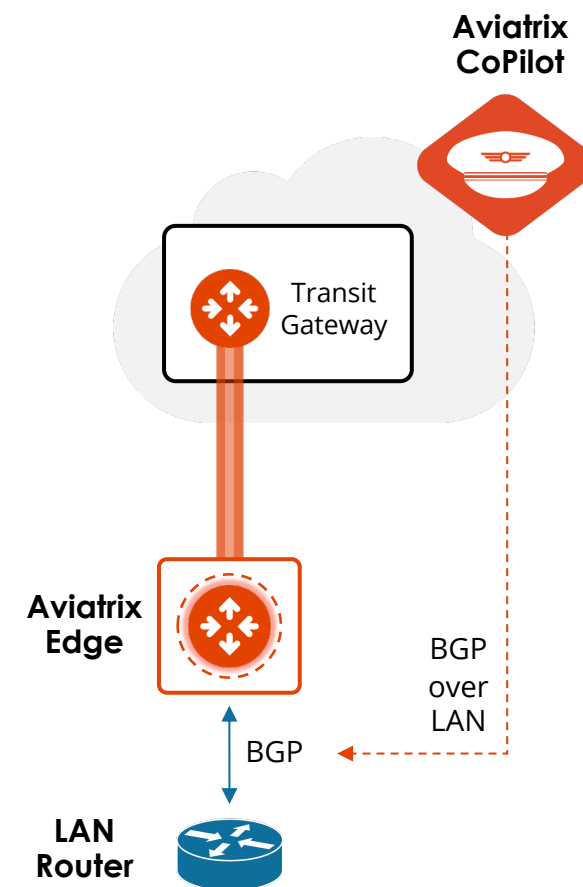

3

Attach Edge to Transit

4

Connect Edge to External Device (LAN Router)

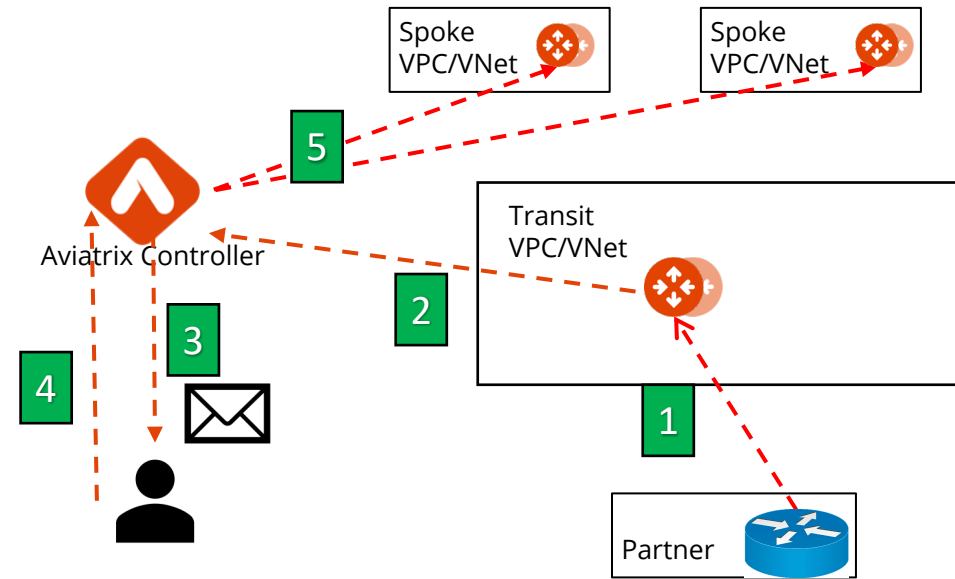

BGP Route Approval

BGP Route Approval

- Can explicitly **approve** any BGP-learned route from Partner or on-prem into the cloud network
- **Prevents unwanted advertisement** of routes such as 0/0

1. New routes arrive at Aviatrix Transit GW
2. Transit GW reports new routes to Controller
3. Controller notifies admin via email
4. Admin accesses the Controller to approve
5. If approved, Controller programs the new routes to Spoke VPCs

BGP Route Approval – Config

- **PATH:** CoPilot > Cloud Fabric > Gateways > select the relevant Gateway

The screenshot shows the Aviatrix CoPilot interface for a transit gateway named 'ace-aws-eu-west-1-transit1'. The 'Approval' tab is selected and highlighted with a green box. A green arrow points from this tab to the detailed approval view below.

Cloud	Region	VPC
AWS	eu-west-1	vpc-03a86350fa4909abd~~ace-aws-eu-west-1-transit1

Name	Availability Zone	Subnet ID	Status
ace-aws-eu-west-1-transit1	eu-west-1a	subnet-0557b31d4673c3aca	Up

The screenshot shows the detailed 'Approval' view for the gateway. It displays a table of CIDRs and their approval status. A search bar is visible at the top right.

CIDR	Approval Status	Action
0.0.0.0/0--ACE-ONPREM-DC	Pending	Approve Remove
10.0.0.0/24	Approved	Approve Remove
10.0.111.0/24	Approved	Approve Remove
10.0.211.0/24	Approved	Approve Remove

BGP Route Approval – Config – Pre-Approved CIDRs

- **PATH:** CoPilot > Cloud Fabric > Gateways > select the relevant Gateway > Approval

The screenshot shows the 'Approval' tab for a transit gateway named 'ace-aws-eu-west-1-transit1'. The '+ Pre-Approved CIDRs' button is highlighted with a red box. An orange arrow points from this button to a modal dialog box titled 'Add Pre-Approved CIDRs'. The dialog box contains a text input field with the CIDR '192.168.10.0/24' and a 'Save' button.

- This feature allows to pre-approving CIDRs advertised by external networks.
- The CIDRs will be propagated without the administrator logs into the CoPilot
